OVERVIEW

Stancona is a solo-built, production-grade full-stack web ecosystem for tabletop RPG communities. It combines a modern marketing site, a consumer mobile PWA, and an admin panel — all powered by a shared design system, AI-native development workflows, and self-hosted infrastructure.

ARCHITECTURE

DESIGN SYSTEM

85+ components across 8 categories (Data Display, Navigation, Feedback, Actions, Data Input, Layout, Foundations, Overlays). Built with daisyUI 5 + Tailwind v4. Every component has automated SSR tests and fixture-based parity verification between Preact and Remix runtimes.

Tech Stack

Layer	Technology	Version
Frontend	Astro, Preact, Remix	7 / 10 / 3
Styling	Tailwind CSS, daisyUI	4 / 5
Build	Turborepo, pnpm, Vite	— / 10 / 8
Database	PostgreSQL, Drizzle ORM	18 / latest
Runtime	Node.js	24+
Infrastructure	Coolify, Traefik, Cloudflare	4.3 / 3.6 / —
AI/ML	LangGraph.js, Langfuse, LiteLLM	— / — / 1.98
Mobile	Preact SPA, Workbox, IndexedDB	PWA

Infrastructure

Coolify PaaS

Self-hosted PaaS on Ubuntu 24.04. Manages all deployments, databases, and proxy configuration. Single Docker daemon.

Cloudflare

CDN, DDoS protection, DNS, SSL termination. Wildcard certs via DNS challenge. Tunnel for admin access.

PostgreSQL 18

Shared platform database. Logical databases for each service (app, umami, listmonk, paperclip, litellm).

AI Stack

Paperclip orchestration, LiteLLM gateway, Hermes agent. Per-company isolation. Budget enforcement.

Development Workflow

Workflow

Artifact chain: Intent → Spec → Plan → Build → Review. Deterministic CI gate (check-sdlc.mjs). Human gates at each step. Immutable decision records (32 ADRs).

Quality Assurance

Biome linting, TypeScript strict mode, Prettier formatting. SSR unit tests per component. Fixture-based parity verification across Preact and Remix runtimes.

DEVELOPER

AI ORCHESTRATION

Stancona integrates AI at every layer: development (OpenCode), content generation, agent orchestration (Paperclip), and LLM gateway (LiteLLM). The system supports per-company isolation, budget enforcement, and provider fallback.

Paperclip

Agent orchestration control plane. Companies, budgets, heartbeats, audit. CEO: Hermes, CTO: OpenCode.

LiteLLM

Unified LLM gateway. 135+ providers, virtual keys, cost tracking, failover. Single API endpoint.

Hermes

Personal AI life assistant. Persistent memory, cron jobs, MCP tools. Connects to Paperclip and LiteLLM.

Artifact Chain

Intent → Spec → Plan. Human gates at each step. Deterministic CI enforcement. Immutable audit trail.

PROJECT ECOSYSTEM

REPOSITORY	PURPOSE	STACK
stancona/codex	Federation SSOT — decisions, business rules	Markdown, MADR, SRD
stancona/grimoire	Application monorepo (3 apps, 8 packages)	Astro, Remix, Preact, Turborepo
stancona/portfolio	Project showcase — screenshots, diagrams, assets	Playwright, Mermaid
stancona/srd	Agentic system template	SRD, OpenCode, AI-native
eminboydak/ops	Personal infrastructure — Coolify, Traefik, services	Docker Compose, Coolify
eminboydak/chronicle	Personal SSOT — decisions, goals, capture	SRD solo-docs, artifact chain

BUILT WITH PURPOSE

Every decision is documented. Every component is tested. Every deployment is automated.
